**Workshop/Training Non teaching Support
(2016-17)**

Highlights of the workshop:

- Introductory lecture by workshop team member on the subject. The points of the discussion were fire, types of fire, mechanism of fire, factors involved on fire and the safety measures to be followed.
- The fire mechanism in terms of fire triangle was discussed. The three important components of the fire triangle are fuel, temperature and oxygen. To deal with the concept of extinguishing the fire means to disconnect any one of the factor of the triangle. This was explained as the mechanism and principle of any fire extinguishing system
- Then the actual demonstration session on the fire hydrant system was given with the actual involvement of the staff members.
- Operation of the fire extinguishing cylinder was also shown.
- Actual hands on experience were also taken by the staff members who attended the training session.
- During the session the staff members from the security were also involved.

Conclusion: The workshop was conducted successfully
