Abstract: For every organization, an office is an essential and a key part. The existence of an office plays a vital role in appropriate functioning of any kind of organization, be it a government institution, trading or manufacturing organization or a service based company. The office acts as a storehouse of every operation within a business organization. A well-managed office is an essential assistance to the management and administration. It assists the management to plan its operations intelligently and put them into action in a competent manner [3]. But till now, all this work was done manually. But this project aims at providing an online platform that will help the Landscaping companies manage their work using an Android Application. This contains various modules like Admin, Maintenance In charge, HR, Supervisor and Headmali. Every module will have specific permission to access the system. Everyone will have to first register to the system by entering their details. After the registration they can login with the help their username and password. Headmali and Supervisor can also fill their work report forms using this system. The report is then submitted to the HR. This system can add clients as well. Also site visit photos can be uploaded in the system.
